

LISTING OF CLAIMS:

1. (previously presented) A card, comprising:  
a card body, comprised of a microcircuit card precut in the card body, a token precut in the card body so as to be adjacent to the microcircuit card and extending up to a corner of the card body, and a remainder portion of the card body removably joined to both the microcircuit card and the token,  
the token carrying visual information and including a hole through a thickness of the token configured to receive a key-ring such that the token may be carried by the key-ring.
2. (canceled)
3. (previously presented) The card according to claim 1, wherein the token extends to only one corner of the card body.
4. (previously presented) The card according to claim 3, wherein the token extends to a corner having a furthest distance from the microcircuit card.
5. (previously presented) The card according to claim 3, wherein the token has sides at least approximately parallel to those of the card body.

6. (previously presented) The card according to claim 5, wherein the token has sides at least approximately aligned with the sides of the microcircuit card.

7. (previously presented) The card according to claim 1, wherein the card body conforms to ID-1 format.

8. (previously presented) The card according to claim 1, wherein the microcircuit card conforms to ID-000 format.

9. (canceled)

10. (previously presented) The card according to claim 1, wherein the token includes a magnetic strip configured to store information.

11. (canceled)

12. (previously presented) The card according to claim 1, wherein the hole is in a corner of the token in a vicinity of the microcircuit card.

13. (previously presented) The card according to claim 1, wherein the token is connected to the remainder portion of the card body by mechanically weakened areas consisting of grooves.

14. (previously presented) The card according to claim 1, wherein the token is a contactless type.

15. (previously presented) The card according to claim 1, wherein the token is a radio-frequency identification label.

16-17. (canceled)

18. (previously presented) The card according to claim 3, wherein the token includes a magnetic strip configured to store information.

19. (canceled)

20. (previously presented) The card according to claim 21, wherein the token further includes a magnetic strip for storing information.

21. (previously presented) A card, comprising:

a body, with a microcircuit card precut in the body, with a token precut in the body so as to be adjacent to the microcircuit card and extending up to only a single corner of the

body, and with a remainder portion removably joined to both the microcircuit card and the token,

wherein the token includes a hole through a thickness of the token configured to receive a key-ring such that the token may be carried by the key-ring.

22. (previously presented) A card, comprising:

a body, with a microcircuit card precut in the body, with a token precut in the body so as to be adjacent to the microcircuit card and extending up to only a single corner of the body, and with a remainder portion removably joined to both the microcircuit card and the token,

the token carrying at least one of visual information and a magnetic strip.

23. (previously presented) A card, comprising:

a body, with a microcircuit card precut in the body, with a token precut in the body extending up to a single corner of the body, and with a remainder portion removably joined to both the microcircuit card and the token,

the token including a hole through a thickness of the token configured to receive a key-ring such that the token may be carried by the key-ring, and

the token carrying at least one of visual information and a magnetic strip.

24. (previously presented) The card according to claim 1, wherein the visual information includes personalizing information.

25. (previously presented) The card according to claim 1, wherein the visual information includes an address or a phone number.

26. (previously presented) The card according to claim 1, wherein the visual information is provided in ink.

27. (previously presented) The card according to claim 1, wherein the visual information comprises characters in relief.

28. (previously presented) The card according to claim 1, wherein the card body further comprises an L-shaped residual portion detachably connected to the microcircuit card and to the token.
